

ORGANIZATION OF SCIENTIFIC AND RESEARCH ACTIVITIES OF GRADUATES IN MASTER'S PROGRAMS IN THE CONDITIONS OF WAR

The article is devoted to the problem of scientific research organization activities of students in the field of knowledge 01 Education/Pedagogy of the second Master's level of education in war conditions. Based on the analysis of scientific sources, own pedagogical experience, the main features are presented research activities of master's students. The key ones have been identified problems caused by military challenges, in the process of implementation pedagogical research. Among them, the most significant is called limited the number of educational institutions that could serve as a base for conducting research, reduction of the staff of qualified scientific supervisors, capable to provide high-quality consulting for the performance of scientific and research works; lack of usual working conditions, remote forms of data collection, etc. The purpose of the research is to identify and analyze the peculiarities of the organization of scientific and research activity of students of education in the field of knowledge 01 Education/Pedagogy of the second Master's level of education in the conditions of war.

To achieve the goal, we used theoretical methods, in particular, bibliographic for study, systematization of scientific and educational methodological literature; for the purpose of clarifying and concretizing the main concepts research, identifying the peculiarities of the research organization activities of students of the second Master's level of education in the conditions of war, generalization of the material, we used analysis; interpretive method used to rethink one's own leadership experience Master's studies; generalization and systematization for formation of a comprehensive understanding of the peculiarities of the organization of scientific research activity of the second-level higher education students in the conditions war.

It was concluded that the difficulties of wartime in the organization research activities of Master's degree holders open new opportunities for improvement and search for new one's research tools and methodical solutions.

The war intensified the challenges facing Ukrainian education. Military events had a negative impact on the organization of research activities of higher education seekers. The quality of performance was at risk Master's qualification papers of a research nature through a series of negative factors, among them: destruction or change of functioning conditions educational institutions-research bases, reduction of qualified scientific managers capable of providing high-quality consulting for the implementation of scientific-research works; lack of usual conditions of scientific work, remote data collection forms, etc.

New challenges prompted the organization of research activities in non-standard conditions, stimulated the development of cognitive creativity of Master

students, intensified the search for non-standard scientific ideas, enriched experience of research activity in heterogeneous educational teams, perfected the art of interaction in a multicultural environment.

The main requirement of today has crystallized – to adapt to new time challenges and develop their competencies and skills according to the rapid changes.

We consider the study to be promising directions for further research use of IT resources for the organization of scientific and research activities applicants of higher education in foreign experience.

Key words: scientific work, Master's degree, scientific-research activities of students, conditions of war.
